Object Detection in Videos with Tubelet Proposal Networks ax1704 cvpr17

2018/10/11 7:45 PM

- Uses feature pooling to combine the features extracted from the same location in consecutive frames;
- the location itself comes from a static object detector;
- the combined features are used as input to a network of which generates a large number of tubelet proposals;
- these tubelet proposals are then fed into an LSTM which classifies them;
